

## Business Information

Business Information is simply the information that is needed to do business, and is specified in business conversational terms.

### Specifics

Business Information is typically either a user requirement level description that can be formalized into [Business Data](#), or a summary level explanation, if the Business Data is known for some existing system.

### Schema

#### **Business Information**

**BI Name** - Short summary name for the business data.

**BI Description** - Distinctive explanation of what the business data is.

**BI Use** - Business description of how it is used or what it is used for.
